

**Troglitazone, 50mM***Cell Culture Reagents-Hormone and Ligand*

产品编号:	CH003
产品描述:	Troglitazone is a potent and selective PPAR $\gamma$ agonist. The EC50 values for transactivation of human and murine PPAR $\gamma$ in a cell-based assay are 0.55 and 0.78 $\mu$ M, respectively. In the same assay system, no activation of PPAR $\alpha$ and PPAR $\delta$ was observed at concentrations up to 10 $\mu$ M. Troglitazone binds to the PPAR $\gamma$ ligand-binding domain (LBD) but fails to induce interaction of the PPAR $\gamma$ LBD with the transcriptional coactivators SRC-1, TIF2, AIB1, p300, or TRAP220. Troglitazone also induces cell cycle arrest and apoptosis in several cancer cell lines with an EC50 of 10 $\mu$ M.
