Erythromycin

Catalogue #: MA016

Storage: -20° C Size: 1mL

Erythromycin, 100mg/mL

Description:

C₃₇H₆₇NO₁₃ F.W. 733.94 [114-07-8]

Application:

Erythromycin prevents bacteria from growing by interfering with their protein synthesis. Erythromycin binds to the 23S rRNA molecule in the 50S of the bacterial ribosome, blocking the exit of the growing peptide chain thus inhibiting the translocation of peptides.
